How to Post a Picture on the Errol Flynn Blog

By David DeWitt Admin/TheErrolFlynnBlog.com

The Errol Flynn Blog has its little quirks like all other blogging platforms. But with this little guide to posting pictures – you should be able to overcome them quickly and get your pictures posted into your articles in no time at all...

First up: on the Post Article Page fill in your Article Title and begin your article text in the posting window as shown. Under Categories on the right hand side of the page, sele ct one or more categories to send your article to: Co-Stars, for example, or whatever other pages seem appropriate. By default, the article is set to Main Page.

Article Content	Article Options
Article Title: Sample Post Article Body: B I U AFF Tu · E E E E E E © Q - ∽ ♥ Your article text	Categories Select one or more categories: Co-Stars Co-Stars The Early Errol Author Errol Flynn Create new category: Bubble up to higher categories Assign Keywords

To add a picture to your text click the icon above the posting window that looks like a landscape with a mountaintop and a sun on a yellow backround.

This window opens:

Add image - windows internet Explor	er

Select an image from a photo album:		
Select an image from a photo album: Photos	Choose Image	
Select an image from a photo album: Photos File Manager You can choose a local image from your file manew file and reference it immediately.	Choose Image	se Image
Select an image from a photo album: Photos File Manager You can choose a local image from your file ma new file and reference it immediately. ose Window	Choose Image	se Image

You can see that your choices are the direct url of the image if you know it, a photo from an existing Photo Album, or a picture from the File Manager. To upload a new image from your hard drive, click Choose Image under File Manager. This window opens. Under File Manager Image, click the Browse button on the Upload Image bar.

🖉 Add Image - Windows Internet Explorer

Here is an example of one of the Blogware's quirks! Clicking the image in File Manager sends the image to the last place your cursor was within the Post Article window. But the image may not become visible inside the Post Article window.

Instead, you may see a Red X or the outline of an image. Drag the corners of the image within the Post Artic le window to resize it. Don't let its edges sit outside the available space of the Post Article window.

Select the Preview Button at the bottom of the Post Article window.

would like to:		
Publish this article u	using today's date	~
C Finish this article lat	er	

On the Preview Article page, the image will load.

Attributes	Content		
Post Status: Publish Formatting: Text	Do not clic content. C	ck the Back button in your browser to make changes. Doing so might result in the loss of your post lick on the Edit button to make changes.	
Posted To: Co-Stars	Title:	Sample Post	
	Excerpt:	None	
	Body:	Your article text.	

When the image has loaded, check it for sizing, and look at your text for mistakes. Click Edit to go back to the Post Article window for editing or click Publish to send your article to the blog as a Published article.

If you need to resize the image, you can do it back on the Post Article window but DO NOT USE THE BACK BUTTON. Click Edit, instead. You may lose your previous work if you use the back button!

Here, we have used the Edit button to return to the Post Article window. Our picture now appears if it hadn't previously. You can select the photo and drag the corners inward to resize it, and make other changes to the text or add links, or code before publishing.

If you are satisfied with the article just click Save, which publishes the article to the blog – or click Preview to see how your changes look before publishing. Recommended!

Publish this article using	today's date	*
C Finish this article later		

Note: if you want to Add a Photo to the blog's Photo Albums, click Photo on the Post Article window page. Under Select an Album highlight the album you want to send your photo to, or create a new album by naming it in the name bar below the Select an Album box.

Click Browse to select a photo from your hard drive and upload it by clicking Add Photo.

	New album name:

That's all there is to it!

Some other Photo no tes: if you have an image resizing program its best to use it so that the file sizes of your images are small. Digital cameras tend to produce large file sizes that take longer to download and are annoying to viewers.

For Articles: if you write your article in another program like Word you can paste it into the Post Article window and have a backup in case you accidentally delete your post! Others have forgotten to save their articles and lost them when they leave the Post Article window. Be mindful of using small fonts sizes since they reproduce best on the blog.
